EDUCATION

University of Windsor

Bachelor of Computer Science with Honours of Applied Computing

Windsor, ON

Sep. 2022 – Apr 2026

TECHNICAL SKILLS

Languages: Javascript/Typescript, Python, Java, C, C++, SQL, PHP, HTML, CSS

Frameworks & Libraries: React, React Native, Next.js, Node.js, Bootstrap, Tailwind CSS, Pandas, Pytorch, Flask

Tools: AWS, GCP, Git, PostgreSQL, MongoDB, Docker, Unity

PROJECTS

Nest | *React Native, Typescript, Python*

Feb 2024 - Feb 2024

- Achieved **3rd place** in a WinHacks 2024
- Developed a **React native** mobile app utilizing **Postgres** and external image **recognition APIs**
- Processed images of birds with over **95%** accuracy using BirdV2 model from **Roboflow**
- Developed a dynamic bird list feature that automatically updates, enhancing user experience and species tracking

SR Dashboard | *React, Express.js, PostgreSQL, Python*

Sep 2024 – Dec 2024

- Developed a responsive and user-friendly interactive map using **React** to display service requests by ward
- Processed Windsors open data in **Python** to transform CSV datasets into JSON files to allow efficient rendering
- Built API endpoints using **Express.js** to fetch and process service request data from a **PostgreSQL** database
- Implemented click and hover interactions for detailed ward-specific statistics and optimized the heatmap performance with preprocessing to reduce loading times and improve user experience

Blackjack AI | *Python, Pandas, Pytorch*

Jan 2024 – Apr 2024

- Developed a Blackjack simulation bot with Python using **Q-learning**
- Implemented **epsilon-greedy** policy for dynamic action selection, increasing long-term rewards by **20%**
- Designed **3** AI versions, running over **1 million** simulations to analyze outcomes

Crypto DApp | *React, NextJS, Typescript, Web3.js*

Jan 2025 – Jan 2025

- Used **Helius** and **JUP** API to integrate blockchain data retrieval and transaction processing into an application
- Designed and implemented a dynamic, real-time chart displaying cryptocurrency price trends using API data
- Developed a **token-swapping** feature using JUP, enabling the exchange of cryptocurrencies within the application
- Implemented a wallet modal capable of **automatically detecting** user crypto wallets, ensuring simple integration

EXPERIENCE

Glendor

Jan 2025 – Present

AI Intern

Draper, UT

- Evaluating open-source algorithms for extracting slide labels and handwriting from pathology slides
- Creating workflows for accurate extraction of text and labels from pathology slides
- Tuning object detection models for improved performance on handwriting and label recognition
- Using **Python** to automate repetitive tasks to reduce redundancy and improve workflow

John Simpson Odette Student Investment Fund

Nov 2024 – Present

Junior Software Developer

Windsor, ON

- Migrating the organization's website from Wix to **React**, modernizing the interface and improving performance
- Building a comprehensive hub that serves as a centralized portal for all applications developed by the club.
- Developed a **React** frontend with a graph to visualize risk and return trade-offs based on ticket weights
